

The Hearing aid for the Person with No Hearing in One Ear

Even if you have been told in the past that you cannot be helped with hearing aids because you have an unaidable ear, WiFi Mic from Unitron can help you hear sounds you have been missing.

WiFi Mic may be the right solution for you if the following describes your situation:

- "Bad" ear with no usable hearing
- Better ear with normal hearing or up to a moderately-severe hearing loss
- You want to hear sounds from both sides

WiFi Mic system is available in two popular hearing aid styles- ITE (in-the-ear) and BTE (behind-the-ear). See pictures on Products page on website.

The excellent sound quality and freedom of this system can truly enhance your hearing. With WiFi Mic you will enjoy hearing conversations from your bad side even when people are seated on the side of your bad ear, you will be able to hear what they say. You will also have heightened awareness of sounds and be more connected to the voices and sounds around you, no matter which side they come from.

You will have more relaxed listening and take pleasure in carefree, easy listening. You'll hear sounds, including soft speech, without having to strain or turn your head.

Conversations around a table, listening in restaurants or driving a car can pose listening challenges when you have one bad ear.

WiFi Mic is a digital wireless system that uses advanced wireless technology to transmit sounds originating from the side of your bad ear to your better ear.

Just as wireless networks allow you to use a cell phone or personal computer without the confinement of cables, WiFi Mic's wireless technology keeps you connected to the voices you want to hear.

No more worries about where to sit to hear conversations. With WiFi mic, you'll be all to hear both sides of the conversation.
